5 plugins · all open on GitHub

5 Claude Code Plugins That Make It Work Like a Senior Developer.

Engineering skills, current docs, a map of your codebase, real UI components and a security test. What each one does, why it matters and the install command from its own README.

Claude Code can already write the code. These give it the habits of someone who's done it for years.

Fadé Adeniyi

WHY THIS GUIDE EXISTS

What does Claude Code get wrong that a senior developer wouldn't?

The difference between a junior and a senior developer is rarely typing speed. Seniors write the spec before the code, check the docs for the version they're actually on, know where things live in the codebase and think about how it could be broken before it ships.

Claude Code on its own skips most of that. It'll happily write code for an older version of a library, reread the same files every session and jump straight to building. It can write the code. It just doesn't have the habits yet and that's what these five add.

Each one adds a single habit: a process, fresh docs, memory of your codebase, a component library and a security check. Install one, use it for a week, then add the next.

BEFORE YOU INSTALL ANYTHING

Not all five are plugins in the strict sense. Agent Skills and 21st install through Claude Code's plugin marketplace. Context7, Graphify and Strix install as a command-line tool plus a skill or an MCP server. They all end up in the same place: **Claude Code can use them without you copying anything in by hand.** Every command here was checked against the project's own README on 1 November 2026.

PLUGINS 01 AND 02

How do you give Claude Code a process and current docs?

01 · PROCESS

Agent Skills by Addy Osmani

112k stars | MIT licence | 25 skills | 9 slash commands

What it does. "Production-grade engineering skills for AI coding agents." It adds slash commands that follow the way software actually gets built: **/spec**, **/plan**, **/build**, **/test**, **/review** and **/ship**. Skills also switch on by themselves, so designing an API pulls in the API design skill.

Why it matters. Claude stops jumping straight to code. It writes the spec, breaks the work into small tasks and tests each one. Where a built-in command shares a name, use the namespaced form, like **/agent-skills:review**.

```
/plugin marketplace add addyosmani/agent-skills
/plugin install agent-skills@addy-agent-skills
```

github.com/addyosmani/agent-skills

---

02 · CURRENT DOCS

Context7 by Upstash

64k stars | MIT licence | Free API key | Needs Node.js 22.13+

What it does. "Up-to-date docs for AI agents." It pulls current code examples and documentation for the library you're using straight into Claude's context.

Why it matters. It fixes Claude writing code for an older version of a library or calling an API that doesn't exist any more. Add "use context7" to your prompt.

```
npx ctx7 setup --claude
```

github.com/upstash/context7 · **context7.com**

PLUGINS 03 AND 04

How do you stop Claude rereading your files and building UI from scratch?

03 · CODEBASE MEMORY

Graphify

140k stars | Apache-2.0 | Needs Python 3.10+ | PyPI: graphifyy

What it does. It turns your codebase, with its docs, SQL schemas, configs and PDFs, into a knowledge graph Claude can query. Type **/graphify .** in Claude Code to build it.

Why it matters. Claude stops rereading files. Once the Claude install is in your project, a hook fires before searches and file reads and points Claude at the graph first.

```
uv tool install graphifyy   # or: pipx install graphifyy
graphify install
graphify claude install     # run inside your project
```

github.com/Graphify-Labs/graphify

---

04 · UI COMPONENTS

21st.dev Magic MCP, now the 21st MCP

6.3k stars | 10,000+ React and Tailwind components | API key needed

What it does. "It's like v0, but in your Cursor / Claude Code / Windsurf." Claude can search a library of real React and Tailwind components and generate new UI from your editor.

Why it matters. Instead of building every button and card from nothing, Claude starts from components people already use. Get your key at 21st.dev/mcp.

```
npx @21st-dev/cli@latest init --client claude
```

github.com/21st-dev/magic-mcp · **21st.dev/mcp**

PLUGIN 05

How do you check what Claude built is safe to ship?

05 · SECURITY

Strix

73k stars | Apache-2.0 | Needs Docker | Needs an LLM API key

What it does. Open-source AI penetration testing. Its AI agents run your app and validate what they find with working proofs of concept, so each issue comes with evidence that it's real.

Why it matters. Working code can still be easy to break into. A senior developer asks how something could be broken before it goes live. Strix asks that question for you, on a local folder, a GitHub repo or a live URL.

```
curl -sSL https://strix.ai/install | bash
export STRIX_LLM="your-provider/your-model"
export LLM_API_KEY="your-api-key"
strix --target ./app-directory
```

To use it from inside Claude Code, the README also lists **npx skills add usestrix/strix**.

github.com/usestrix/strix · **strix.ai**

> **ONLY TEST WHAT YOU OWN**
>
> Strix actively attacks whatever you point it at. **Only run it against apps you own or have written permission to test.** Testing someone else's site without permission is illegal in most countries.

Start here	New to Claude Code? Install **Agent Skills** and **Context7** first. They help on every project.
Add next	Once your project has grown, add **Graphify**. Building a front end? Add **21st**. Before you ship, run **Strix**.

MORE FROM ME

Use Claude Code for more than code.

Install one plugin today, give Claude a real task and watch what changes. Then add the next one. If you want to see what else Claude Code can do, these two guides show you how I use it to edit videos.

Edit Your Videos with Claude Code · Opus 5.5	Describe the edit in plain English and Claude Code writes the Remotion code that builds it. The four setup commands, a video editor skill and your first edit. **Read the guide**
The Storyboard-First Edit	The framework to paste into Claude Code to trim a raw take, set a look and approve real frames before anything renders. **Read the guide**

Claude already knows how to code. These teach it how to work.

What this guide won't do. These tools don't replace reviewing what Claude writes. Context7 and 21st need an API key and Strix needs Docker plus your own LLM API key, which your provider may charge for. Star counts and install commands were checked on 1 November 2026 and may change, so if a command fails, check the project's README.
